

Quasiregular mappings: obstructions and constructions

Pekka Pankka

University of Helsinki, Finland

`pekka.pankka@helsinki.fi`

The p -harmonic theory is an indispensable tool in the study of spatial quasiregular mappings. In this talk I will discuss, how this approach – promoted especially by [I] – leads to cohomological obstruction results for quasiregular mappings. I will also discuss constructions of quasiregular mappings in higher dimensions.
