

# **CENTER OF DISTANCES AND CENTRAL CANTOR SETS**

**MICHAŁ BANAKIEWICZ, ARTUR BARTOSZEWICZ,  
MALGORZATA FILIPCZAK, AND FRANCISZEK PRUS-WISNIEWSKI**

We study a recently discovered metric invariant - the center of distances - that is particularly useful in investigating achievability of sets on the real line. We concentrate on the question which central Cantor sets have the minimal possible center of distances and which have not.
