PETER KAHLIG (Wien)

NOTE TO THE PAPER
"A MODEL OF COMPETITION"

(Appl. Math. (Warsaw) 39 (2012), 293–303)

In the recent paper [1], *Proposition 3.5 is not new.* Its content is equivalent to the statement that π and $\exp(\pi)$ are algebraically independent; this fact is well known.

Acknowledgements. The author is indebted to Professor Peter Flor for critical remarks.
